A global industrial PC manufacturer focused on hardware for the IoT edge, Logic Supply designs highly-configurable, small form factor computers engineered for reliability. Their systems operate in the harshest environments and power innovation in the evolving Internet of Things. Fueled by a unique direct-to-customer business model that combines vertical integration, modular product design and a powerful online platform, Logic Supply offers computers “designed to last, built to order, and delivered in days.” Founded in 2003, the company has served more than 70,000 customers worldwide from offices in North America, Europe, and Taiwan.

Logic Supply computers power everything from NASA planetary rovers, to underwater UAVs, advanced manufacturing equipment, physical security devices, interactive digital media installations and even giant fighting robots. Their hardware is being used to solve complex computing challenges in smart agriculture, factory automation, energy management, digital entertainment, connected medical applications and Industry 4.0 installations around the world.

At this forum, Logic Supply will detail their process and quality improvement methodology, including examples of how ongoing continuous improvement efforts are positively impacting growth, capacity and efficiency. Attendees will also hear from Logic Supply leadership about how these improvements are directly impacting their production process and even efficiencies on their sales team. Finally, Logic Supply will detail how ongoing improvements are paving the way for their future growth plans.

Who should attend: Senior leaders and Lean thinkers at all levels of your organization. This event is limited to Vermont Manufacturers and VMEC partners.

There is NO FEE for this forum but you must pre-register. Check out this one-minute “About Logic Supply” video which gives an overview of what the company does and how their products are used throughout the world.
